

## ROSSINI SPA

### NEW PRODUCTS FOR CONVERFLEX 2009.

Rossini, the undisputed leader in sleeves and sleeve-carrier systems for rotogravure and flexographic printing, will introduce numerous new products at Converflex 2009. One of its stand's main attractions will certainly be the innovative **ThermoPolymerSleeve** series, made with continuous, direct engraving, which provides extremely precise print register between colours, reduced preparation time, and countless other technical advantages. During the exhibition, the new series will be tested on a **special test print machine**, a sophisticated control device to demonstrate the physical-structural qualities of latest-generation Rossini sleeves. Also, at the stand, Rossini will introduce a brand new **Anti-Deflection Carrier Sleeve**.

Another new product in Milan will be the first **Rossini Sleeve Storage**, a system for storing and organizing sleeves of all types and sizes. Built in the form of racks for rapid use of pieces, Sleeve Storage is a vertical structure that exploits all available space, a modular system that can expand to satisfy future needs.

Naturally, the Rossini Stand will also have Speedwell rotogravure sleeves, Everstat flexographic sleeves, and the new Everglass sleeves for Narrow-Web machines.
