

SACCHETTIFICIO MONZESE srl

Sacchettificio Monzese, leading manufacturer of paper envelopes for commercial and advertising purposes announces the launch of the new **EnvEcoLaser** (Envelope Ecological Laserprint, *Patent Pending*), the first envelope with a special window made of transparent paper, fully ecological and recyclable and suitable for laser printing.

The new **EnvEcoLaser** envelopes are fit for small quantities which are typical of small businesses and advertising purposes as they allow to personalize the mailing and save costs and time with now outsourced printing resources to depend on.

Sacchettificio Monzese will present the new **EnvEcoLaser** at GRAFITALIA 2009, the main Italian Exhibition of graphic arts, print media and Communications, which will take place in Milan Rho-Fiera from 24th to 28th March 2009.

EnvEcoLaser are produced and packed with the main flap open so that the envelope can easily, quickly and first time round be printed with Laser printing machines. In this way the whole surface of the envelope can be printed front and back, including the closure flap.

The whole product is also ecologically sensible (ECF Elemental Chlorine Free) as it is fully recyclable due to the special window made of special transparent paper.

EnvEcoLaser enable the user to make him/herself independent when printing pictures and logos with digital quality, personalizing the graphics and logos. The possibility of printing in quadrichromy provides the top quality as well as a cost saving procedure as no minimal print run is necessary. All such features simplify the internal procedures and allow the user to use the same envelope to print different bespoke mailings.

EnvEcoLaser are perfectly fit for digital and flexible printing and are more and more required by both final users and distributors as now they can print their own window (or no-window) envelopes by themselves.

The performing features of the product, the photo quality of the results as well as the quickness in printing guarantee the success of the new **EnvEcoLaser** envelopes.

Our Company is environmentally FSC & PEFC certified.
