

SELECTRA SRL

SELECTRA SRL: INNOVATION AND QUALITY AT CONVERFLEX 2009

For over forty years Selectra Srl has been offering a wide range of products for the industrial automation applied to the printing and packaging field. The company's attention to quality and technological innovation, and also to user-friendliness, makes our systems competitive on the national and international markets. On the occasion of Converflex 2009, Selectra will show technologically advanced equipment, such as automatic register controls, automatic viscosity systems, web guides and video inspection systems for rotogravure, flexographic and, web offset printing presses. Visitors of our booth will have the chance to observe the new automatic register control Regolus CRX with stand-alone cameras, which prevents from printing errors and reduces production waste, bringing colours to register from any starting position; the new fibre optic register control CRS 9008 EYE TOUCH for rotogravure machines with Windows interface; the new viscosity system VR1, based on the principle of the falling body in a fluid; the web inspection system Inspecto CS2; and last but not least, the new web guide Seleguide 9000 LCD with LED optic sensor or ultrasonic sensor, which is having a great success in Italy as well as abroad, thanks to its user-friendliness and its competitive price. To assure the full satisfaction of customers, Selectra is assisted by skilled engineers who offer a wide technical advising support from designing to after selling assistance.
